

## Data processing

### Homework week 1

Jochem van Dooren (10572929)

1. The purpose of HTML is to give the website structure and the purpose of CSS is to give te website a proper layout.
2. ID's are unique and classes aren't. Assigning a class/ID to something makes it very easy to style certain blocks/elements of a website. Selecting a div with the class "box" in CSS should be done by writing this in the CSS file:

```
.box { }
```

3. <h> is a header.  
<p> is a paragraph.  
<body> is the body of the website. (the part where most of the website goes)  
<br> is an empty line.  
<head> is the header of the page. The title etc. are located at the header.
4. Padding is the space between the content and the border. Margin is the space outside the border.
- 5.
